ABOUT ME

I'm a Front-End Developer focused on building high-performance, user-centric web applications. Through optimization techniques such as lazy loading, pagination, and the use of React hooks like useMemo, useCallback, and memo, I consistently achieve page load times of 3 seconds or less in testing. I emphasize best practices like component-driven development (CDD), creating efficient, atomic, and reusable components that improve scalability and maintainability in the medium and long term. My work combines technical precision with a strong focus on UX, UI, and performance.

EXPERIENCE

Freelance projects

AzzADesigns-Webs

Remote

Sep 2025

- Built “Lucio Aquino”, a custom personal brand website developed for a client with over 10 years of experience in the video game development industry. The site features advanced animations using GSAP, a component-driven development (CDD) approach, and lazy-loading techniques to maximize performance and optimization, achieving a perfect score of 100 in all Lighthouse audits.

Front End developer

Remote

ShareIT community

Jun 2025 – Aug 2025

- ‘ATSfor-ShareIT’, a web application for creating CVs. My contributions reduced form error rates by 70%, improved the usability and efficiency of responsive forms by 80%, and enhanced the overall web design, delivering a smoother and more engaging user experience.
- “ShareIT Web, a community platform for the Latin American tech community. I worked on a four-person team to maintain and scale the existing codebase. My key contributions included component-based development and streamlining the registration process by eliminating unnecessary steps, improving the user experience by 90% by reducing a multi-section form to a concise terms and conditions acceptance workflow

Front End developer

Remote

No Country (Teamwork simulation)

Oct 2024 – Mar 2025

- Developed the complete front-end for “ClassRun”, an app designed to help teachers manage assignments, grades, and exam schedules, while providing academic tracking tools for students and parents. Quickly learned and implemented Next.js, ShadCN, and TypeScript. Despite backend issues and a teammate leaving the project, I delivered a working UI by the final deadline.
- Led front-end efforts in “Urbania”, a real estate platform where agents can log in, publish, edit, and manage properties, as well as create employee accounts. Took charge of front-end design and feature implementation, improved performance, and guided teammates in code structure and componentization.

SKILLS

Technologies: TypeScript, React, Next.js, Node.js, Express, Tailwind CSS, ShadCN, GSAP, React Hook Form, Zustand, REST API, GitHub, Trello, Httpie, Warm.

METHODOLOGIES

Best Practices & Patterns: Lazy Loading, Atomic Design, SRP, SOLID, CDD.

EDUCATION

Various,

Associate Degree in Software Development (in progress) / UX/UI Course – Codo a Codo / Official Next.js Course / Self-taught in React and Node.js / technical English.
